

KULDEEP MAHOUR

Software Engineer II

kuldeepmahour6@gmail.com linkedin.com/in/kuldeep-mahour github.com/Kuldeep-045 +91-8755303820

Education

National Institute of Technology, Jamshedpur

Bachelor of Technology, Electronics and Communication Engineering

Jamshedpur, India

2019 – 2023

Professional Experience

Gokwik

Software Engineer II

Software Engineer

Gurugram, India

Apr 2026 – Present

Mar 2024 – Apr 2026

- Designed and maintained distributed backend systems processing **20M+ transactions/day** for a commerce checkout platform, owning reliability and auditability guarantees.
- Built backend services and platform components in **Golang** and **Node.js**, exposing REST APIs for a multi-tenant payment system serving **15K+ merchants**.
- Migrated core services to an event-driven architecture using **Apache Kafka**, reducing p99 API latency by **30%** and improving horizontal scalability.
- Contributed to the **BNPL / Pay-Later** flow, implementing parts of the loan **state machine** and idempotent lender **callbacks** (agreement/refund/EMI) with reconciliation, integrating an external lender.
- Automated payment reconciliation across **multiple aggregators**, replacing a fully manual file-based process (no visibility, frequent sync issues) with an engine reconciling **12–15M transactions/day** and surfacing every mismatch as a tracked dispute.
- Raised platform availability to **99.9% uptime** and increased payment success rate by **20%** through performance and resilience improvements.
- Owned on-call for **15 services** with monitoring, logging, and RCA; shipped preventative fixes that cut mean-time-to-root-cause by **30%** and recurring incidents by **90%**.
- Adopted AI coding assistants (**Claude, Codex**) in daily development, reviews, and refactoring, roughly **2x-ing delivery speed** on routine feature and refactor work.

Celigo

Software Engineer

Gurugram, India

Jan 2023 – Dec 2023

- Built backend services and strictly-typed REST APIs for enterprise platform systems handling large-scale data workflows.
- Developed internal automation tools that reduced manual operational effort; followed code reviews, testing, and Agile SDLC.

Technical Skills

Programming: Golang, JavaScript, TypeScript, C++, SQL

Databases: PostgreSQL, MongoDB, Redis, Trino, ClickHouse

Backend: Backend Services, REST APIs, Microservices, API Design

Distributed Systems: Event-Driven Architecture, Apache Kafka, Scalable Systems

Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD, Git

Engineering: System Design, Data Structures & Algorithms, SDLC, Testing, Monitoring, Logging, On-call Operations

Achievements

- Solved **1500+** Data Structures and Algorithms problems.
- 5-Star** HackerRank rating in Problem Solving.
- 3rd place**, Hack-de-Science Hackathon.
